

Commode Riser

Restop® is proud to announce the arrival of a new product to ensure an even better outdoor sanitation experience...the **Commode Riser**.

Developed from several years of input from the mobile workforce the Commode Riser provides a better, more comfortable, experience by raising the Commode by 3 inches thereby accommodating a wider range of users. The riser also provides increased stability in most conditions.

Built from high-impact durable high density polyethylene (HDPE), the Commode Riser is ultra-light, weighing only 3 pounds and yet is incredibly durable. Tent pegs can secure the Commode Riser on uneven or soft terrain. Like most of our products it is proudly made in the USA.

Combined with the best bags and privacy shelters in the business the Gamma Sealed Commode with the Riser brings the best portable sanitation solution available.
